Microsoft Fabric unifica todas las cargas de trabajo de **datos y análisis** en una única plataforma, simplificando la gestión de datos y facilitando la colaboración. Su arquitectura está diseñada para ofrecer escalabilidad, seguridad y una experiencia de usuario sin fricciones, con OneLake como su núcleo fundamental.

Un Data Agent es una **interfaz conversacional** inteligente que permite a cualquier persona de la organización formular preguntas en **lenguaje natural** y obtener **respuestas precisas** basadas en los datos corporativos.

Elimina la barrera técnica entre los usuarios de negocio y los datos almacenados en sistemas complejos, facilitando la toma de decisiones informadas.

Power BI Copilot

Hi

Uncover insights in your data with the help of AI

Find an item

- Find reports about [a topic]
- View semantic models related to [a topic]
- Show me apps about [a category]

Get a summary

- Prep a summary for my team about report
- Summarize key insights in report
- Give a quick overview of report

Ask a question

- Answer a question about data in report
- Show me [a metric] over time
- What can Copilot help me with?

View prompts

Ask a question about your data

+ Add items for better insights →

Copilot uses AI. Always review content for mistakes. [Read terms](#)

The screenshot shows the Power BI Copilot interface within a web browser. On the left is a sidebar with navigation links: Home, Copilot (which is selected), Create, Browse, Data catalog, Apps, Workspaces, and a list of recent datasets including 'Dunder Mifflin Sales' and 'Un_Dunder_Mifflin_Sales'. The main area features a 'Hi' greeting and a tagline 'Uncover insights in your data with the help of AI'. It displays three main sections: 'Find an item', 'Get a summary', and 'Ask a question', each with a list of AI-generated tasks. At the bottom, there's a prompt box for asking a question about data, a 'View prompts' button, and a note about AI usage. The taskbar at the bottom shows the weather (19°C Soleado), a search bar, and various system icons.

Un artefacto independiente y personalizable

A diferencia de Copilot, el Data Agent es mucho **más configurable** y funciona como un componente autónomo dentro del ecosistema Fabric

- Control total sobre comportamiento y respuestas
- Personalización específica por caso de uso
- Integración flexible con múltiples orígenes y hacia múltiples destinos

El Data Agent actúa como un **traductor** sofisticado, convirtiendo preguntas cotidianas en lenguajes de consulta estructurados que los sistemas de datos comprenden.

Agent instructions

Guide the data agent to the best data sources for different types of questions by writing a detailed system prompt. Learn more

Context and Conversation Flow Anchor follow-up questions to prior results. Maintain a rolling memory of the most recent entity (employee, product, branch) mentioned by the user or surfaced in your answer. Resolve pronouns and vague references. When users say "that employee", "their salary", "his evaluation", "that branch", or similar, map the reference to the latest entity unless the user specifies a different one. If multiple candidates exist, ask for clarification before proceeding. Prefer explicit names in responses. Even if the user uses pronouns, restate the employee or branch name in your reply to avoid ambiguity (e.g., "Dwight Schrute's salary is..."). Example narrative flow: User: "Who sold the most yesterday?" AI: "Dwight Schrute led sales yesterday with \$18,500 in revenue..." User: "What is his salary?" AI: Interprets "his" as Dwight Schrute, retrieves salary details (or returns the appropriate access-controlled message). Handle context switches gracefully. If the user later says "Now tell me about Jim Halpert", treat Jim as the new active context for subsequent pronouns.

DunderMifflinAgent

Dunder Mifflin Sales & HR Intelligence Agent - An AI-powered data assistant that provides instant insights into sales performance, operations, and human resources analytics. Access real-time sales metrics, product performance, branch comparisons, and employee information with role-based data governance. Perfect for Sales Managers, Operations Teams, and HR Personnel seeking data-driven decisions across the Dunder Mifflin organization.

What are the historical trends across all my data?

Analyze recent data for any outliers

Show me the details for a specific subcategory of data

Sample questions

Ask a question to test the data agent's response

Mistakes are possible. Review terms

Conexión explícita a los orígenes de datos

El agente **necesita estar conectado específicamente a los orígenes** y a las tablas correctas. No inventa fuentes de datos ni adivina dónde buscar información.

Límite de 5 orígenes diferentes

Puedes conectar Lakehouses, Warehouses, modelos semánticos y bases de datos KQL, con un **máximo de 5 orígenes distintos** para mantener la coherencia.

Instrucciones al agente

Guían el razonamiento lógico y la selección del origen de datos apropiado. **Definen el comportamiento de las respuestas**, incluyendo tono y estructura comunicativa.

Instrucciones del origen de datos

Proporcionan **contexto esencial para construir consultas precisas**: descripciones de tablas y columnas, lógica de negocio, y ejemplos de consultas comunes.

Los permisos siempre prevalecen

Aunque el Data Agent tenga acceso técnico a todas las tablas del sistema, **si tú como usuario no tienes permisos otorgados, no verás absolutamente nada.**

Principios de seguridad

- **RLS y CLS respetadas.** Seguridad a nivel de fila y columna.
- **Permisos mínimos.** Sin acceso base al origen = error o resultados vacíos.
- **Trazabilidad completa.** Todas las consultas auditables.

The image displays two side-by-side screenshots of the Microsoft Power BI Copilot interface, illustrating how the AI tool personalizes its interaction based on the user's name.

Screenshot 1 (Left): Hi Jim

The interface is titled "Copilot Vista previa". It features a greeting "Hi Jim" and the subtext "Uncover insights in your data with the help of AI". Below this, there are three main cards:

- Find an item:** Find reports about [a topic]
- Get a summary:** Prep a summary for my team about informe
- Hacer una pregunta:** Answer a question about data in informe

Below these cards are additional options:

- Find reports about [a topic]
- View semantic models related to [a topic]
- Show me apps about [a category]
- Get a summary for my team about informe
- Summarize key insights in informe
- Show me [a metric] over time
- Show me apps about [a category]
- Give a quick overview of informe
- What can Copilot help me with?

A large input field at the bottom asks "Pregunte algo sobre sus datos" (Ask something about your data) with a placeholder "+ Add items for better insights". A "Ver solicitudes" button is located below the input field.

Screenshot 2 (Right): Hi Michael

The interface is titled "Copilot Vista previa". It features a greeting "Hi Michael" and the subtext "Uncover insights in your data with the help of AI". The layout and card content are identical to the left screenshot, reflecting the personalized experience for Michael.

Common UI Elements:

- Header:** "Power BI Copilot" and "Incógnito (2)"
- Search Bar:** "Buscar" (Search)
- Left Sidebar:** Includes icons for "Inicio", "Copilot", "Crear", "Examinar", "Catalogo de Contenidos", "Aplicaciones", "Metricas", "Supervision", "Más información", "Área de trabajo", "Dunder Mifflin Scr.", and "DunderMifflin Agent".
- Bottom Status Bar:** Shows weather ("20°C Mayorum, soleado"), search bar, taskbar with various application icons, and system status indicators (Wi-Fi, battery, volume).
- Bottom Right:** Date and time ("15/10/2025 11:31") and a "Ver solicitudes" button.
